Career Objective

AI & Automation-focused computing student with hands-on experience in backend development, cloud computing, machine learning, and workflow automation. Skilled in Python, APIs, databases, AWS cloud services, and data processing pipelines. Experienced in developing automation systems, handling structured datasets, and building scalable software solutions. Passionate about integrating AI tools and cloud workflows to improve operational efficiency and solve real-world business problems.

Professional Experience

06/2025 – 09/2025	Full Stack Developer Intern
Chandol, Kathmandu	<i>Infobrain Technologies</i> • Developed secure backend services and RESTful APIs for a core banking system using C# and ASP.NET Core, supporting financial transaction processing and operational workflows. • Designed and optimized PostgreSQL database schemas, wrote complex SQL queries, and ensured data integrity for banking operations including account and transaction management. • Built responsive frontend components with Bootstrap and JavaScript to streamline internal banking workflows and improve operational usability. • Collaborated on scalable financial systems and backend integrations supporting reporting and transaction management processes.

Educational Qualification

2023 – Present	Bsc (Hons) Computing <i>Islington College</i> London Metropolitan University Kamalmarg , Kamalpokhari ,Kathmandu
2019 – 2021	SLC <i>United Academy</i> National Examination Board Kumaripati ,Lalitpur
2019	SEE <i>Mechi English School</i> National Examination Board Phidim, Panchthar

Skills

Technical skill

Programming Languages:	Python, Java, JavaScript, C#
Web Development:	HTML/CSS, Responsive Design, Bootstrap
AI & Automation:	Prompt Engineering, AI-assisted Workflow Automation, Large Language Models (Claude), Machine Learning Pipelines, Structured Data Analysis
Automation & APIs:	REST APIs, workflow scripting, automation systems
Cloud & DevOps:	AWS (EC2, S3, Lambda), Docker
Databases:	MySQL, PostgreSQL, MongoDB
Data Processing:	CSV handling, data preprocessing, reporting automation
Version Control:	Git, GitHub
Data Analysis:	Pandas, NumPy
Frameworks:	React (Basic), Node.js
Tools:	Postman, VS Code, PyCharm, Visual Studio
Operating Systems:	Windows, Linux

Soft Skills

Effective Communication, Leadership, Problem Solving, Critical Thinking, Team Collaboration, Team Collaboration, Time Management, Adaptability, Creativity

Projects

CliniTerra - Appointment management system [🔗](#)

Group Coursework

Built a responsive clinic management system with Jakarta EE, ensuring secure backend and easy-to-use interface. Integrated relational database for managing appointments, doctors, and patient records. Enabled patient doctor selection and admin management of profiles and services with data integrity.

GUI Application - Java-Based User Management System [🔗](#)

Software Development Project

Developed a Java-based desktop application with a user-friendly GUI for managing user data. Implemented input validation and encryption to ensure data security. Improved usability with intuitive form design and navigation

Commercial Website - E-commerce Platform for Printer Business [🔗](#)

Web Development Project

Built a fully functional e-commerce website for printer products with HTML, CSS, and JavaScript. Implemented a user-friendly UI, product catalog, shopping cart, and checkout system

Automated Invoice & Reporting System [🔗](#)

Automation Project

Developed a Python-based automation system to process transaction data, calculate totals/taxes, and generate timestamped PDF invoices automatically.

Built structured data workflows to reduce manual processing effort and improve reporting accuracy.

Implemented automated file generation and data handling techniques for business operations.

Improved operational efficiency through scripting and workflow automation.

Password Generator Tool [🔗](#)

Security & Scripting Project

Created a Python tool that generates secure passwords with options to choose length and include letters, numbers, or symbols. Designed an easy to use command-line interface with features to create multiple passwords at once and copy them automatically. Included tips on creating strong passwords to help users improve their cybersecurity habits.

AI & Machine Learning Crime Classification System

Machine Learning Coursework Project

- Developed supervised machine learning models to analyze and classify real-world crime datasets containing over 1 million records from the LAPD Open Data Portal. • Performed data preprocessing, feature engineering, and structured CSV data analysis using Python, Pandas, and NumPy.
- Implemented and compared Logistic Regression, Random Forest, and XGBoost classification models for predictive analytics.
- Evaluated model performance using accuracy, precision, recall, and F1-score metrics.

- Applied machine learning concepts including classification, ensemble learning, feature engineering, and predictive modeling for structured datasets.

Smart Irrigation System using IoT & Cloud Monitoring

Cloud Computing & IoT Project

- Developed an IoT-based smart irrigation system using ESP32, soil moisture sensors, relay modules, and cloud-connected monitoring workflows.
- Automated irrigation control by processing real-time soil moisture data and triggering water pumps based on predefined thresholds.
- Integrated cloud and remote monitoring capabilities using Wi-Fi connectivity and Blynk dashboard for real-time system management.
- Designed data-driven automation workflows to improve water efficiency and reduce manual intervention in agricultural operations.
- Collaborated on system architecture, sensor integration, and automation logic for sustainable smart farming solutions.
